The applicant submits a permit application to the County.

The County reviews permit application to determine if the project could impact critical areas, shorelines, or their associated buffers.

If critical area or shoreline resources are present and may be impacted, the applicant explores avoidance and minimization measures.

If critical area or shoreline resources are absent or will not be impacted, the County processes the permit application.

The applicant submits a permit application to permitting agencies (Corps of Engineers, Ecology, and WDFW). The applicant selects a mitigation option (in this case: ILF program or permittee-responsible) in consultation with the permitting agencies.

If impacts cannot be fully avoided, the applicant submits a report(s) to permitting agencies that complies with federal, state, and/or local regulations.

If the applicant selects ILF mitigation, the applicant contacts the ILF sponsor to determine if ILF mitigation is suitable.

The ILF sponsor works with the applicant to develop an ILF Use Plan.

The ILF use plan is submitted to the permitting agencies for approval of the credit calculation within the plan and use of the ILF program. For buffer only impacts, the ILF use plan is submitted to the County for approval.

If the applicant selects permittee-responsible mitigation, the applicant submits an ILF Use Plan to the permitting agencies that comply with federal, state, and/or local regulations.

The applicant is responsible for the design and implementation of the required mitigation project.

The applicant may be required to post a bond with the County equal to the full cost of the mitigation plus a contingency.

The applicant must monitor and maintain the mitigation project—usually for five (and in some cases up to 10) years—to evaluate site performance and submit annual reports.

The applicant must take any necessary corrective actions to ensure mitigation project success.

The applicant may be required to place a site protection mechanism (e.g., conservation easement or notice to title) over that portion of the property where the mitigation project occurs.

The mitigation permit terms and conditions have been met and the applicant’s mitigation requirements have been satisfied.
